

Open-Source: It's more than just code

Who am I?

- Christofer Dutz
- Snr. Staff Software Engineer
- Rivian
- Committer of many Apache projects
- Member of the Apache Foundation
- VP of Apache PLC4X
- Member of the ASF Board of Directors
- Twitter: [@ChristoferDutz](#)
- LinkedIn: [christofer-dutz](#)

Agenda

- Dimensions of Open-Source
- What did I do wrong?
- How can we do it better?
- Open Discussion

Dimensions of Open-Source

- Technical Dimension
- Community Dimension
- Commercial Dimension

Technical Dimension

- Which is the problem I want to solve?

Technical Dimension: PLC4X (2017)

- Industry 4.0 is everywhere
- Open-Source has solutions for almost all I40 use-cases
- I40 is all about processing industrial (production) data
- Problem: No open-source solution for accessing the data on industrial automation hardware
- Thesis: If there was a solution for this problem, the automation industry would provide me with interesting project for the rest of my (work-) life

Technical Dimension: PLC4X (2017)

PLC4X is a set of libraries for communicating with industrial programmable logic controllers (PLCs) using a variety of protocols but with a shared API.

— Apache PLC4X Project Statement

Technical Dimension: PLC4X (2017)

Community Dimension

- Am I the only one wanting to solve this problem?
- Can I convince others to work on this with me?

Community Dimension: PLC4X (2017)

Testbaloon ApacheCon NA Miami 2017

Thanks to codecentric

- Let me work 3,5-4 years on PLC4X full-time
- Financed my travels as well as soft- and hardware
- Gave me a platform to spread the word:
 - Blog
 - Conferences
 - Booths at fairs
 - Contacts to the IT-press

Joining Apache

- Explicitly chose Apache:
 - Vendor-neutrality
 - Apache has an excellent reputation
 - Apache-Way is excellent for building communities

Spreading the word

- Postings in social media
- Blog-posts
- Articles for IT magazines
- Talks at conferences & meetups

Social media

Social media

Mind-Games: Toddy

Lower entry boundaries

- Tooling: Make is as simple as possible
- Rule: Only put up the ones you really need
- Make people committers as early as possible
- Talking to myself on the mailinglist

Lower entry boundaries

```

Commercial Dimension

- Does anyone have the problem I'm trying to solve?
- Is anyone interested in using my solution?
- Are these also able to use my solution?
- Are these also willing to support me?

Commercial Dimension

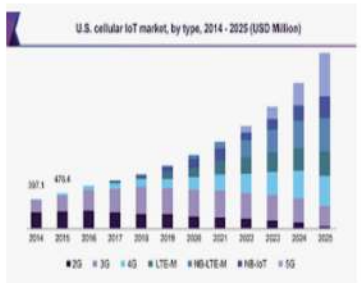

Commercial Dimension: PLC4X

Commercial Dimension: PLC4X

- Problem:
 - IT und OT diverged end of the 90s
 - OT-folks don't know open-source
 - OT-folks don't know consulting
 - OT-folks usually only work with big established vendors
 - OT-folks don't read IT-press
 - OT-folks don't go to IT-conferences
 - OT-folks don't realize, that Industry 4.0 more IT than it is OT

Commercial Dimension: PLC4X

- How I still tried to get noticed:
 - Guerillia-Marketing on industrial fairs
 - Presence meetings at potential customers (If they don't come to me, I'll come to them)
 - POCs (at rates that didn't even slightly cover the costs)

Commercial Dimension: PLC4X

- Recently I added more of this:
 - Talks on automation fairs and conferences
 - Podcasts
 - Political involvement
 - Commenting social media posts of established OT folks and vendors

Commercial Dimension: PLC4X

Commercial Dimension: PLC4X

- Acquisition in OT is a thing of months up to years
- No real industrial gigs till 2020
 - Just POCs over a few days
- Had to decide what to give up:
 - Working at codecentric
 - Working on Apache PLC4X

Commercial Dimension: PLC4X

- Decided to give up on codecentric
- Plan was earning money with PLC4X consulting
- Idea was:
 - As a freelance consultant I need way less income to survive
- Problem was:
 - Being on my own: Even less credible than with an unknown company
 - Only one single paid gig in 2020 + 2021

@ChristoferDutz

Dear [#industry](#): Your free trial version of “open-source” has expired, please update to a commercial plan

A blog post of mine explaining why I am stopping to provide free community support for [@ApachePlc4x](#) effective emmediately.

Blog Post

Blog Post

What I tried next

- Stopped providing fee support for PLC4X
- Promised to help people solve their problems as mentor
- Support, consulting, training only via contracts
- Added "crowdfunding" section to my website for financing feature development
- GitHub Sponsors page

How did that help?

- Got 3-4 smaller consulting contracts early 2022
- Not a single cent was paid for any of the crowdfunding campaigns
- 3-4 months after my blog-post, almost no incoming requests
- Only one Apache friend sponsored me for a few months (Till I asked him to cancel that)

So was it all for nothing?

- Crowdfunding was a complete failure
- Crowdfunding was probably the most successful thing

WTF?!?

- Due to legal and financial requirements form of donation-based crowdfunding doesn't work
- It listed possible features and added a price-tag to them
- Companies need price-tags to decide things
- Got requests from multiple companies willing to partially finance some campaigns

These Layers in relation

Technical Dimension

Community Dimension

Commercial Dimension

Summing it up: What were the challenges?

- Visibility (Open-Source freelancers are almost invisible)
- Customers are used to buying products and not services
- Customers "can't" make business with small companies
- Legal documents usually dictated by customers
- Consultant easily becomes reliant on one or two customers
 - These often start exploiting the consultant

What did I do wrong?

What do I think we need?

- Entity/Platform for offering open-source services
- Offering:
 - Consulting
 - Training
 - Support
 - Feature-Development:
 - Crowd-Funding platform

What do I think we need?

- Big enough to be able to get listed as "preferred vendor"
- Big enough to be able to present itself at fairs and conferences
- Big enough to have connections to press
- Big enough to have a financial and legal department able to take on bad customers
 - Option to pay the consultant immediately or earlier
- Providing standard well-balanced, open-source compatible contracts

Summary

- Starting your own Open-Source project is:
 - Unbelievably much work
 - Can provide unbelievably much joy
- Even though my failure to earn a living with it, I wouldn't call it a failure.
- Would always do it again ... just different ;-)

A wooden sign with a black chalkboard center is placed on a wooden surface. The sign has the text "THANK YOU SEE YOU AGAIN" written in white chalk. The sign is surrounded by several crumpled pieces of paper, some blue and some yellow, scattered around it.

THANK YOU
SEE YOU
AGAIN
